ARTIN FOR KENTICO

Development of enterprise CMS and digital experience platforms

We provided Kentico with a long-term team of 6–10 senior developers (.NET, Azure, React) who worked as an integral part of Kentico's product teams – from e-commerce and cloud to content management – with onboarding within 2 weeks and a new person delivered within a month.

CHALLENGE

Kentico needed to scale its development teams quickly, but hiring senior developers internally took months. Frontend specialists were especially hard to find. It risked having to merge teams and jeopardize product development. It needed a partner to deliver senior developers fast, with no compromise on quality, who would fit its culture.

SOLUTION

- Senior developers delivered within 1 month (vs. months of internal hiring)
- Onboarding in 2 weeks (vs. 6+ weeks for internal hires)
- Full integration of ARTIN people into the client's teams (own desk, team-building events)
- Self-managing teams working according to Scrum
- Flexible scaling based on current project needs
- Proactive account management, available 24/7

TEAM SIZE

6–10 senior developers at a time

TECHNOLOGIES

.NET, MS Azure, React

PROJECT DURATION

2020–2025

WHAT THE CLIENT VALUED

ARTIN people work as part of the in-house team – they don't need supervision, they bring their own ideas and best practices, and when a problem comes up, we look for solutions, not culprits.

"Hiring developers internally takes us many months. ARTIN can deliver a person within a month at the latest. And a professional at that."

— Kamil Řezníček, Engineering Manager, Kentico
