CASE STUDY

ARTIN FOR Y SOFT

Y Soft is a global leader in enterprise print solutions – print management, document digitization and workflows for both enterprise and SMB customers.

Five fully integrated development teams (35 ARTIN people) handle end-to-end development of the cloud and on-premise print solution within the LeSS framework – from backend services and terminal interfaces to mobile apps.

CHALLENGE

Y Soft needed a reliable development partner for its key products – an extensive on-premise solution for enterprise customers and a new cloud application for the SMB segment. They were looking for teams that could work independently, respond quickly to changing requirements and take ownership even of technically demanding tasks that others avoided.

SOLUTION

- Development of backend services, frontend applications and APIs for the entire print workflow
- Building and optimizing terminal solutions (graphical interfaces on printers)
- Web, desktop and mobile apps for print management
- Implementation of an SBOM (Software Bill of Materials) for the cloud solution
- Unified print drivers for cloud and on-premise
- DevOps and cloud infrastructure operations

TEAM SIZE

35 developers in 5 teams

TECHNOLOGIES

.NET, C#, Python, Angular, React, Azure

PROJECT DURATION

Since 2019 – ongoing

WHAT THE CLIENT VALUED

The ability to work as a well-coordinated, self-organizing team that takes on the tasks others avoid – and delivers them with excellence.

"12 out of 13 teams complained about the work, but ARTIN took it on and got it done. It's refreshing to have someone who takes on tasks and makes sure they're not just done, but done excellently."

— Martin de Martini, CIO and founder of Y Soft
